Pediatrics, Hospital for Sick Children, Toronto, Ontario, Canada  
M5G 1X8 and Department of Microbiology, University of Toronto*

**Summary** A cytotoxin active on Vero cells, less active on hela cells, and inactive on WI38 cells (Vero toxin [VT]) was detected in stool isolates of *Escherichia coli* from 8 of 15 sporadic cases of haemolytic uraemic syndrome (HUS). Stools from 5 of these 8 patients were examined for faecal VT activity, and all were positive. Of the 7 of 15 patients who did not have VT<sup>+</sup> *E. coli*, 2 were positive for faecal VT, and a third (patient K) had strong serological evidence of VT<sup>+</sup> *E. coli* infection. 2 HUS patients, including patient F, had siblings with uncomplicated diarrhoea who

## USDA says E. coli O157:H7 outbreak likely linked to ground beef

By Coral Beach on March 30, 2021

UPDATED: Comments from CDC added

Federal officials have concluded investigation of a previously unrevealed multi-state foodborne illness outbreak. Ground beef was identified as the likely source of the E. Coli O157:H7 behind the infections.

## E. coli O157:H7 outbreak likely caused by leafy greens of unknown origin is over

By News Desk on December 22, 2020

Forty confirmed cases of E. coli O157:H7 sent 20 people to hospitals in 19 states in an outbreak linked to leafy greens. But the specific type or brand remains unknown and the outbreak is over, reports the federal Centers for Disease Control and Prevention.

# STEC O104:H4 outbreak in Germany 2011 - adults

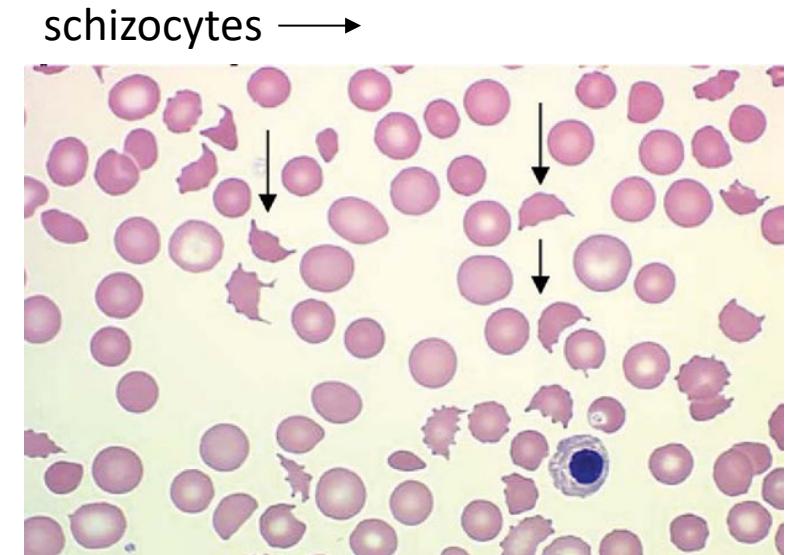

## STEC infection → STEC-HUS in children

Annual Incidence STEC-HUS children < 5 y varies per country: 10.4/100.000 in Argentina; 1.5-1.8/100.000 in Italy / France / Germany

# Symptoms STEC-HUS patients at presentation

- Previously healthy , age < 5y, seasonal variation, m=f
- Vomiting, nausea
- **Diarrhea (watery, often bloody) , however in 10% of STEC-HUS patients NO diarrhea at presentation**
- Pale,
- Jaundice in some
- **Fever** absent in most cases
- Petechiae , ecchymosis
- Restless, irritable, somnolence, convulsions
- Oliguria, anuria
- ...Pancreatic involvement
- ...Cardiomyopathy
- ..

# Detection of STEC

# Use rectal swab when no stool is immediate available

Enteropathogen detection in children with diarrhoea, or vomiting, or both, comparing rectal flocked swabs with stool specimens: an outpatient cohort study

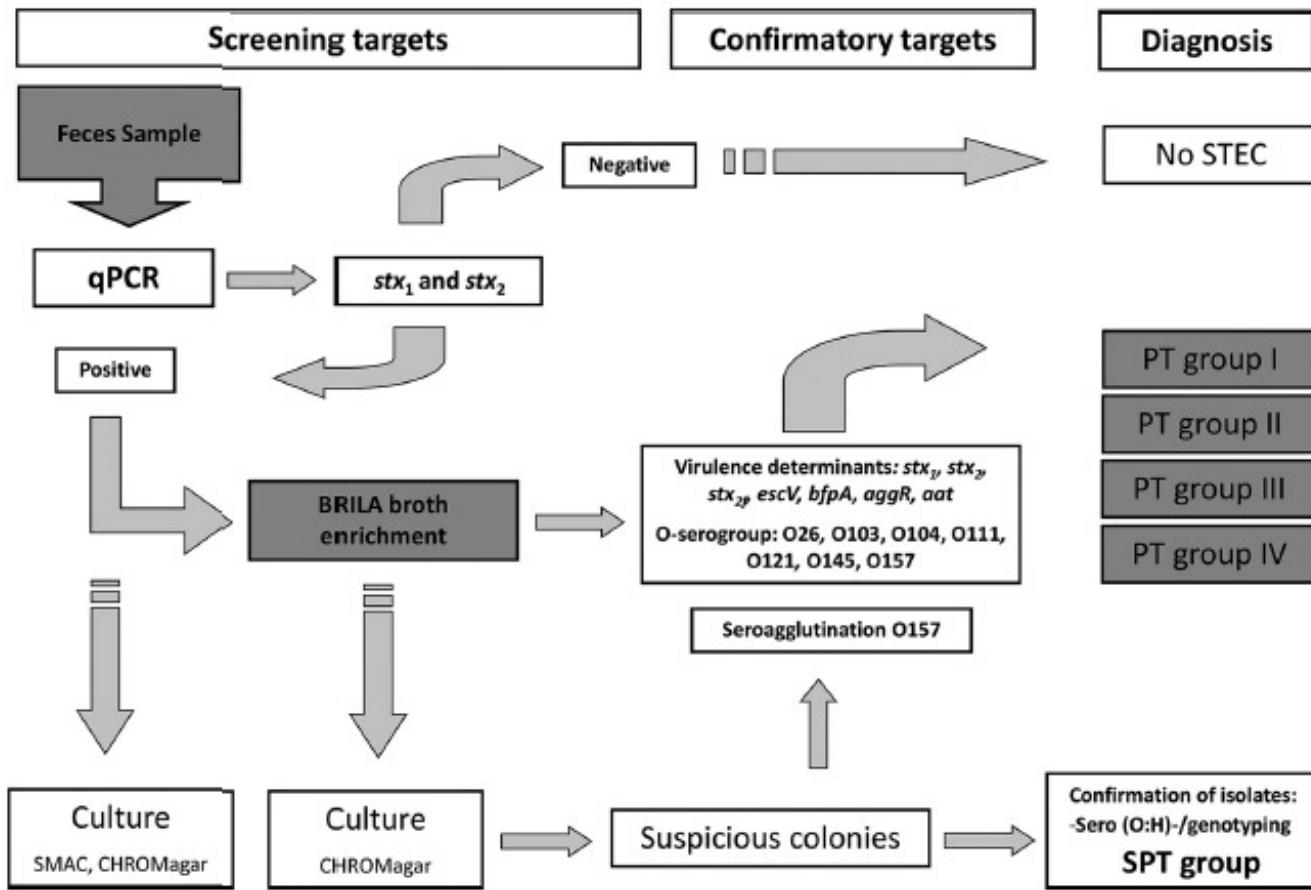

Stephen B Freedman, Jianling Xie, Alberto Nettel-Aguirre, Bonita Lee, Linda Chui, Xiao-Li Pang, Ran Zhuo, Brendon Parsons, James A Dickinson, Otto G Vanderkooi, Samina Ali, Lara Osterreicher, Karen Lowerison, Phillip ITarr, on behalf of the Alberta Provincial Pediatric EnTeric Infection TEam (APPETITE)\*

N=1519

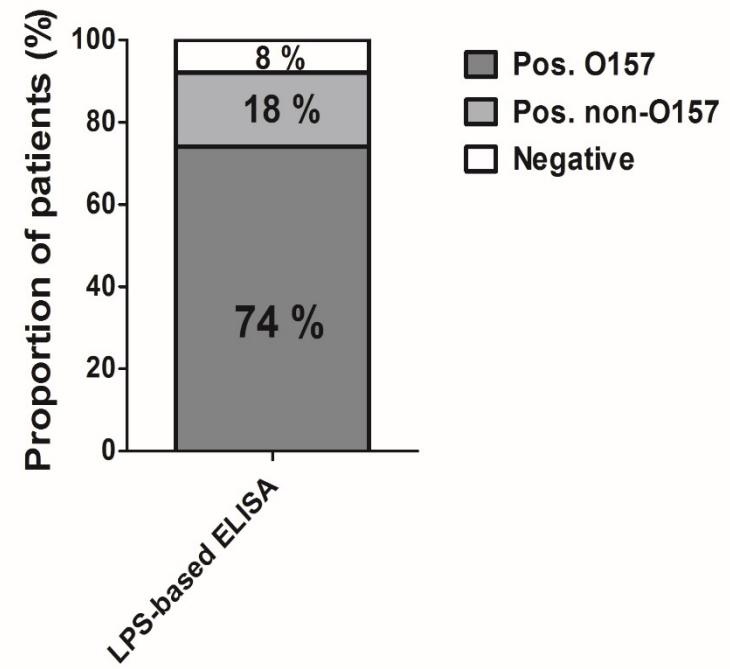

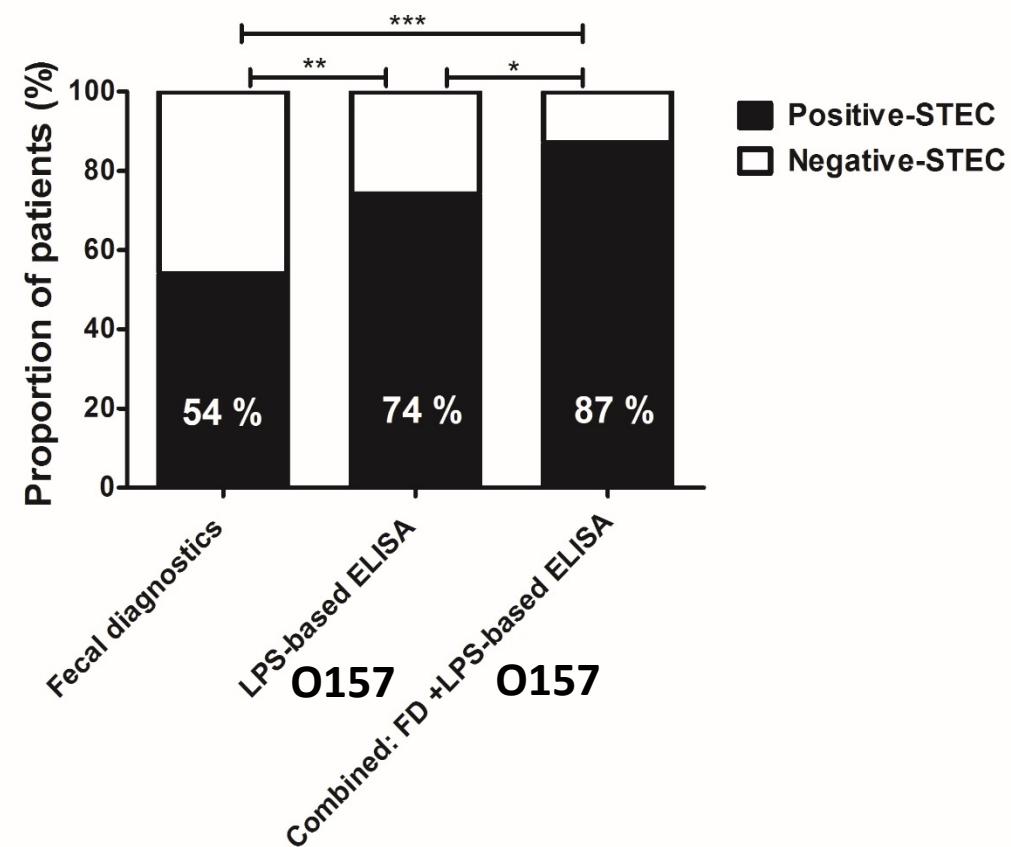

**Interpretation** Rectal swabs should be done when enteropathogen identification and rapid detection are needed, appropriate molecular diagnostic technology is available, and a stool specimen is not immediately available. In view of their high yield, we urge that the recommendation against the use of rectal swabs as diagnostic specimens be reconsidered.

## Acute renal failure in infancy and childhood

### Clinical course and treatment of 41 patients

Experience with 41 infants and children in acute renal failure is recorded; 28 of them had the "hemolytic-uremic" syndrome. The mortality attributed to renal failure was 37 per cent. Exchange transfusion was performed in 9 children, peritoneal dialysis in 6, and extracorporeal dialysis in only 2. The regimen for conservative treatment of acute renal failure is discussed, and the efficacy of exchange resins in the management of hyperkalemia is emphasized.

No evidence for use plasmapheresis /  
eculizumab in STEC-HUS , n=491

# Complement gene variants and Shiga toxin producing *E. coli* associated hemolytic uremic syndrome

CJASN<sup>®</sup>  
Clinical Journal of American Society of Nephrology

**Conclusions** Rare variants and complement activation biomarkers were not associated with severity of Shiga toxin associated-HUS. Only pathogenic variants with minor allele frequency <0.1 % are more frequent in Shiga toxin positive-HUS patients than in controls.

## Eculizumab in STEC-HUS: need for a proper randomized controlled trial

Sebastian Loos<sup>1</sup> · Jun Oh<sup>1</sup> · Markus J. Kemper<sup>2</sup>

Randomized, double blinded, placebo  
controlled trial in UK, Dr S Johnson

Traitemen précoce de patients pédiatriques présentant un  
syndrome hémolytique et urémique typique par l'anticorps  
monoclonal anti-C5 eculizumab: essai thérapeutique prospectif  
randomisé contrôlé contre placebo de phase III

### Etude ECULISHU

Promoteur : CHU de Toulouse  
Investigateur principal : Dr Arnaud GARNIER, [garnier.a@chu-toulouse.fr](mailto:garnier.a@chu-toulouse.fr)  
ARC coordinatrice: Isabelle KIEFFER, [kieffer.i@chu-toulouse.fr](mailto:kieffer.i@chu-toulouse.fr)

Randomized, single blinded, placebo-controlled

# Treatment of STEC-HUS

Only symptomatic treatment

- **Timely rehydration intravenously!!**
- Renal replacement therapy
- Blood transfusions
- No antibiotics!
- Mortality: 1-4%
- 20-30% long term sequelae

JAMA Pediatrics | Original Investigation

## Associations Between Hydration Status, Intravenous Fluid Administration, and Outcomes of Patients Infected With Shiga Toxin-Producing *Escherichia coli*: A Systematic Review and Meta-analysis

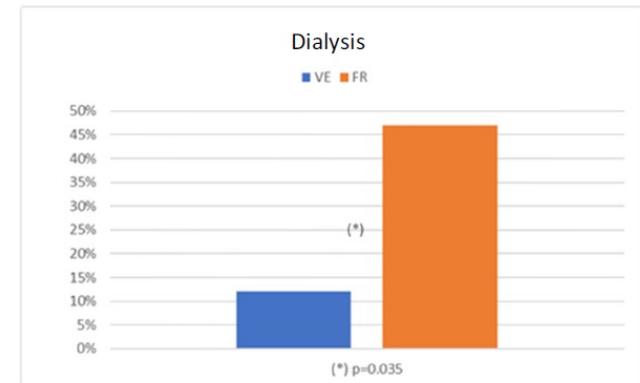

Silvia Grisaru, MD; Jianling Xie, MD, MPH; Susan Samuel, MD; Lisa Hartling, PhD; Phillip I. Tarr, MD; David Schnadower, MD, MPH; Stephen B. Freedman, MDCM, MSc; for the Alberta Provincial Pediatric Enteric Infection Team

 Supplemental content

**IMPORTANCE** The associations between hydration status, intravenous fluid administration, and outcomes of patients infected with Shiga toxin-producing *Escherichia coli* (STEC) remain unclear.

*For every 3 patients treated with volume-expansion , it is possible to prevent 1 dialysis*

5y

➤ ≥1: 22% 60/274

**Recommendation: Follow-up investigations yearly : Bloodpressure, protein/creatinin ratio**

# Take home message

- Acute bloody diarrhea: think STEC!
  - Stool and Serology
- Use rectal swab if no immediate stool available (stool 3x)
  - If Stx2/Stx1+2 positive:
    - Dipstick urine – if hemoglobinuria – blood examination
    - Start rehydration!
    - Examination stool of family members!
- In 10% of STEC-HUS no diarrhea as presenting symptom
  - Emerging serotypes such as O80
- STEC activates the complement system, but complement is not the main driver of disease
  - No evidence for eculizumab as treatment of STEC-HUS

## IMPORTANT UPDATE to our VTEC/STEC community: VTEC 2021 rescheduled to VTEC 2023

Online meetings to be held in May 2021 and 2022

Register for this year's online meeting [here](#)

May 11, 2021

**VTEC2021 a 2,5h online meeting!
